WILD AUF BLUMEN

🌸 „Ganz gleich, ob du deine LEGO® Botanik Kollektion erweiterst oder du dein erstes LEGO Blumenarrangement erschaffst, uns eint wahrscheinlich unsere Begeisterung für Blumen. Dieser Strauß ist ein frischer Blumenmix, den du selbst in einem Feld oder Garten pflücken könntest. Wir haben sich ergänzende Farben und Arten aus aller Welt kombiniert, um die Artenvielfalt auf unserem Planeten sowie die Schönheit unserer Natur zu feiern.

Viel Spaß beim Bauen!"

LEDERFARN

(Rumohra adiantiformis)

✿ Der buschige Lederfarn ist in den meisten tropischen Klimazonen der Südhalbkugel heimisch und erfreut sich mittlerweile größter Beliebtheit bei Gartenbesitzern in aller Welt. Er bildet zwar keine Blüten, doch sein federartiges Blattwerk wird von Floristen gern als dekorative „Füllmasse“ für Blumengestecke verwendet.

WIESENKERBEL

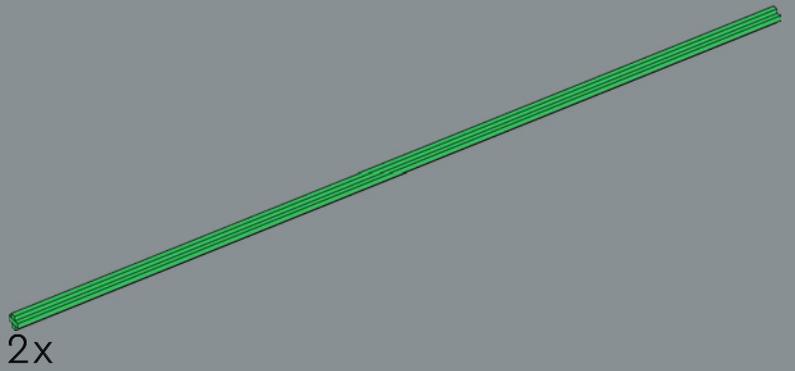

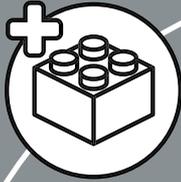

(Anthriscus Sylvestris)

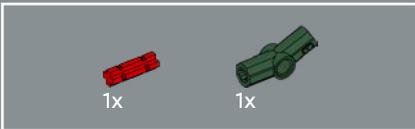

✿ Der luftig-wolkenartige Schirm aus winzigen weißen Blüten ist häufig auf schattigen Flächen in Europa, Asien und Afrika zu finden. Sein Blütenfeuerwerk ist eine Leckerei für Bienen, Motten, Schmetterlinge und andere Insekten, die bei Frühlingsanfang nach Blütenstaub suchen. Wusstest du, dass Wiesenkerbel häufig als Mückenschutz dient?

WALD-SCHEINMOHN

*(Meconopsis cambrica/
Papaver cambricum)*

✿ Ein zuverlässiger Frühlingsbote auf den Britischen Inseln und in Westeuropa ist der in einem sanften Goldton blühende Wald-Scheinmohn in Hecken, auf Feldern und am Straßenrand. Trotz seiner zarten Stängel und Blütenblätter gedeiht er auch auf felsigem Untergrund mit dünner Humusschicht sowie in den Ritzen gepflasterter Gartenwege oder Bürgersteige.

Das Palmenblatt-Element wurde erstmals in den 1990er-Jahren in der LEGO® Themenwelt „Piraten“ benutzt. Jetzt wurde es umfunktioniert, um den Lederfarn darzustellen.

Vorhandene Elemente auf ungewöhnliche Weise zu verwenden, ist ein wesentlicher Aspekt beim Bauen mit LEGO® Steinen. Hier wurde die Radnabe eines Autos benutzt, um die Narbe in der Mitte der Blüte eines Wald-Scheinmohns darzustellen.

Der englische Name „Queen Anne's Lace“ geht auf ein altes Sprichwort zurück, das besagt, dass die Blumen für Königin Anne von Großbritannien (1702-1707) und ihre Hofdamen blühen würden, um deren Spitzengewänder zu zieren.

2x

KORNBLUME

(Centaurea cyanus)

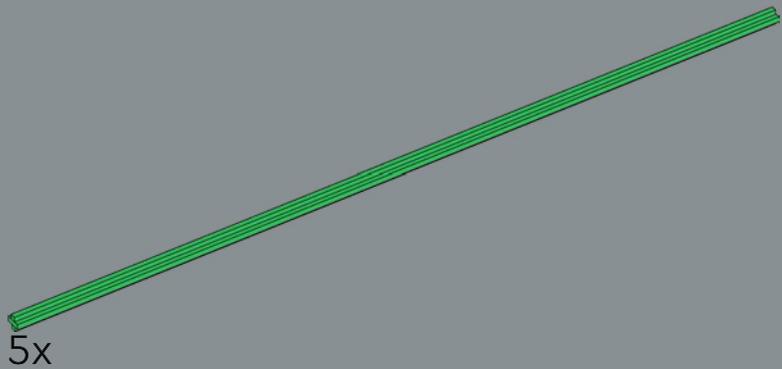

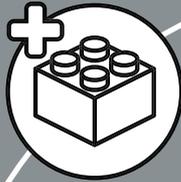

✿ Die farbenfrohe Kornblume blüht vor allem in Europa, Nordamerika und Asien und ziert im Frühsommer Felder und Gärten mit ihren weißen, rosafarbenen und blauen Blüten. Ihr sanfter Duft und ihr Nektar locken Schmetterlinge und Bienen an und machen die Kornblume zu einer wertvollen Ergänzung für Gemüsegärten und Obstwiesen.

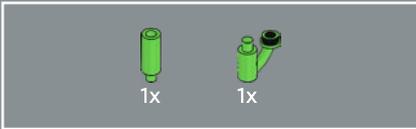

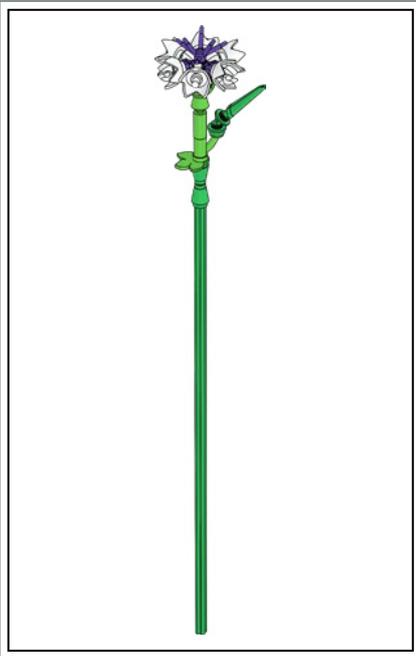

LAVENDEL

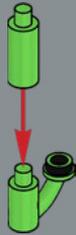

(Lavandula)

✿ Lavendel ist ein immergrüner, wohlriechender Zierstrauch mit Blütenstand in markanten Lilatönen. Er ist ebenso nützlich wie dekorativ. Lavendel ist im Mittelmeerraum, im Nahen Osten und in Nordafrika beheimatet und wird als würziges Küchenkraut, zur Gewinnung von ätherischen Ölen für Kosmetikprodukte sowie in der Kräuterheilkunde verwendet.

Die LEGO Gruppe arbeitet daran, eine nachhaltigere Zukunft für unsere Kinder zu schaffen. Derzeit werden mehr als 80 LEGO® Elemente wie Bäume, Blätter und Sträucher aus Biokunststoff hergestellt, der aus nachhaltig angebautem Zuckerrohr gewonnen wird. Das sind unsere Pflanzen aus Pflanzen! Diese Elemente sind die ersten Schritte auf dem Weg zu unserem großen Ziel, die LEGO Steine bis 2030 aus nachhaltigen Quellen herzustellen.

LUPINE

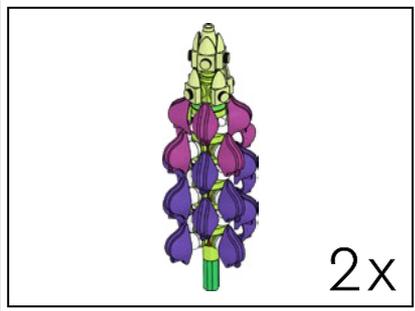

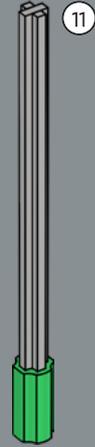

(Lupinus)

🌸 Die ursprünglich in Nordamerika beheimateten Lupinen gedeihen auch im Mittelmeerraum und in Europa in freier Natur. Die in unterschiedlichsten Farben blühenden Ombré-Ähren ragen hoch hinauf, um in der nordamerikanischen Prärie, am Straßenrand und in Gärten rund um den Globus Bestäuber anzulocken. Und diese Farbenpracht bleibt natürlich auch uns Menschen nicht verborgen.

Die Minifiguren, die 1989 diese Piratenhüte trugen, hätten sich niemals vorstellen können, dass ihr schicker Kopfschmuck eines Tages die Blütenblätter von Lupinen darstellen würde.

11

A LEGO Technic assembly of a flower bouquet. It features a tall green stem with several blue flowers and buds at the top. Below this, there are two large, flat flowers: one yellow and one pink, both with detailed centers. The flowers are constructed from various colored Technic bricks and pins.

GARTEN-FELDRITTERSPORN

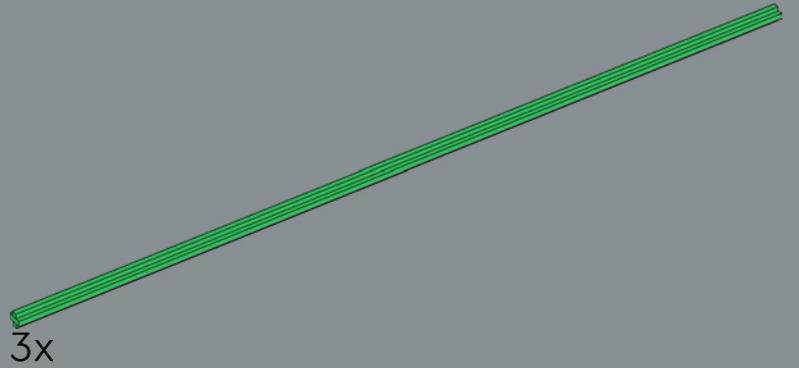

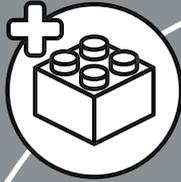

(*Consolida ajacis*)

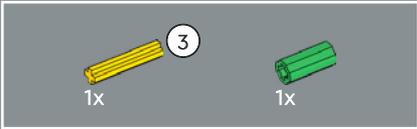

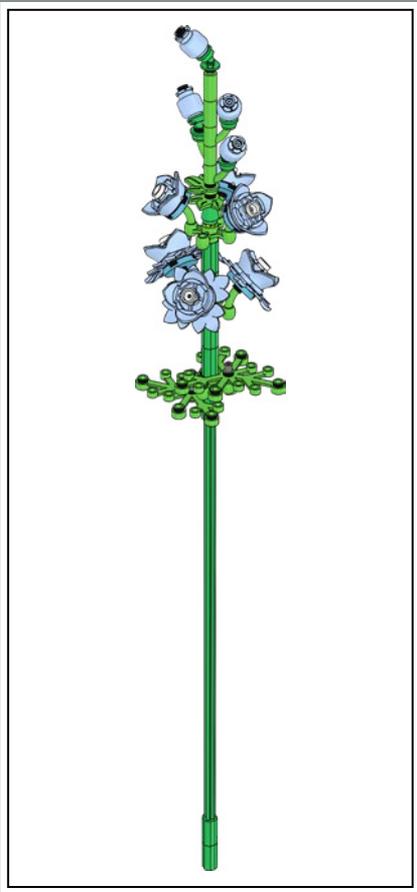

✿ Der Garten-Feldrittersporn beschert uns spektakuläre Blütenmeere in unterschiedlichen Blautönen in den Feldern und Gärten der Nordhalbkugel. Die einjährige Pflanze taucht am Frühlingsanfang zusammen mit dem eng verwandten mehrjährigen Rittersporn auf und verleiht unserem Blumenstrauß mit ihrer Länge einen luftig-eleganten Farbtupfer.

GERBERA- GÄNSEBLÜMCHEN

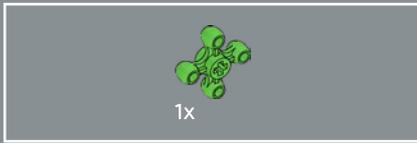

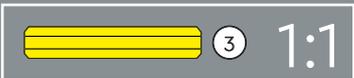

(*Gerbera jamesonii*)

✿ Diese leuchtende Gerbera ist mit der Sonnenblume verwandt und in allen Farben des Regenbogens erhältlich. Die in Südafrika beheimatete Pflanze wird auch als Barberton-Gerbera bezeichnet. Ihr sanfter Duft und ihre majestätisch emporragende Krone aus samtigen Blütenblättern lassen die Blume aus jedem Garten, Feld oder Blumenstrauß hervorstechen.
